LaTeX Examples: Enumerate

1. If, for example, you were making a test or a homework assignment, you can use the "enumerate" commands to write the questions.

2. Each "item" will be given its own designated number.

3. If you had a question with multiple parts, you can specify them by starting another "enumerate" command.

    (a) This could be the first part of the question.

    (b) This could be the second.

    (c) And so on.
