

L^AT_EX Examples: Tables and Figures

Creating a table, such as Table , is fairly straightforward and simply a matter of filling in pieces.

	ϕ	ρ	α
MLE	0.520	0.425	0.348
	(0.009)	(0.028)	(0.021)
	< 0.001	< 0.001	< 0.001
QLS	0.519	0.324	0.390
	(0.009)	(0.042)	(0.021)
	< 0.001	< 0.001	< 0.001

It is important to note that writing in the “Tabular” setting is not friendly to mathematical expressions, and thus we must use (\$) as if we were writing in text.

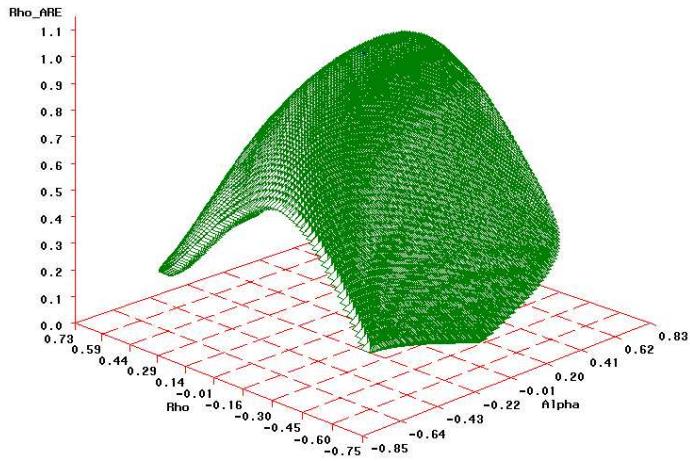

Figure 1: Generic Graph

Like tables, figures are relatively easy to incorporate into a document, such as Figure 1. One thing you should note is that you must turn on the “Graphics” package located in the preamble. Also note that the “caption” command gives Figure 1 a title.

The figure will be automatically placed by L^AT_EX.
