Essay Questions:

What changes, if any, could be made to the class that would have helped you to learn more? What could the instructor have done to make the course an even better learning experience?

This is always the hard one to talk about since every class has a lot of information to get across so the professors can't do much in the aspect of reducing the amount of stuff we are taught....presenting the info i feel like went very well compared to how i think it could've went. I had professor Weinstein substitute in another class i was in and i could really see the difference in engagement and how Weinstein was able to physically show us what happens with magnetic fields with these radical experiments he brought in.

What could you have done to make the course an even better learning experience?

To not be so dumb, lol. This is a hard class, it will be hard even for those that get it, but not impossible. I think i couldve payed more attention to the amount of time i was putting in for this class...oh and not to have such a hard school load would've helped.

When I struggled with homework I tended to just skip the problem. Instead, I should've just emailed the professor. The few times I did he was very helpful.

What did you like most about the class and your instructor?

Essay Questions:

I liked most about this class is that professor Weinstein was teaching it, he has a way of connecting with students.

The organization and presentation of material. The professor was great at connecting one topic to another.

What factors about this class contributed the most to your learning? What aspects of this class helped you to learn to think critically?

Professor Weinstein being the enthusiastic teacher that he is played the biggest role in me and my fellow peers to STAY connected throughout his lectures. Anything and everything about this class helps me to think more critically due to the fact that it is quantum mechanics.

The recitations helped A LOT. I've had lots of classes where the recitation is basically a third lecture as opposed to doing problems ourselves. Also, the way that we were able to work through problems and if we got stuck we were given a nudge to help.

What factors about your own performance helped you learn the most? What did you do to facilitate your learning?

Recitations and homework for the practice of course. I also don't normally speak out and answer questions in class, but I did this semester and that made me feel much more confident in the material.

being strong willed and to not give up after defeat or not giving up after understanding how long a problem will be is crucial in this class. This is a hard class to understand none the less, dedication to understand the homework is crucial, and motivation to keep up this amount of attention is also an important aspect for passing.
